

EKLAKH DEWAN

Data Analyst — SQL — Data Visualization — Business Intelligence

eklakh.inplace@gmail.com — GitHub — LinkedIn — Portfolio

SUMMARY

Data Analyst focused on transforming structured and unstructured data into clear, actionable insights through **SQL**, **Python**, **data cleaning**, **exploratory analysis**, **visualization**, and **reporting**. Experienced in building data-driven applications, recommendation workflows, analytical dashboards, and ML-supported analysis using **Pandas**, **NumPy**, **PostgreSQL**, **Streamlit**, and **scikit-learn**. Strong foundation in data preparation, feature analysis, similarity modeling, KPI-oriented reporting, and communicating analytical results through practical software systems.

EDUCATION

KPR Institute of Engineering and Technology (KPRIET)

B.Tech – Artificial Intelligence & Data Science

2023 – 2027

CGPA: 8.55/10

EXPERIENCE

Flowrage Technology

Artificial Intelligence Intern

4 Weeks – Virtual

- Processed unstructured resume and job-description data to support automated candidate-job matching and recommendation workflows.
- Developed data-processing pipelines to clean, transform, and structure textual information for downstream analysis.
- Applied **TF-IDF** and dense semantic embeddings to represent textual features and measure candidate-job similarity.
- Developed matching and ranking logic using similarity scores, feature extraction, and structured recommendation outputs.
- Integrated the **Google Gemini API** into AI-assisted text processing and recommendation workflows.

PROJECTS

AI-Powered Job Recommendations Dashboard

Python — Pandas — scikit-learn — Streamlit

- Built a data-driven recommendation workflow for matching candidate profiles with job descriptions using structured text features.
- Performed text preprocessing and feature engineering using **TF-IDF**, dense embeddings, and cosine similarity.
- Developed a Streamlit interface presenting recommendation results, similarity information, and skill-gap insights for interactive analysis.

Insurance Claims Analytics & ML Automation

Python — Pandas — NumPy — XGBoost

- Developed an end-to-end analytical workflow covering data ingestion, cleaning, preprocessing, feature engineering, and predictive modeling.
- Analyzed historical claims patterns and addressed class-imbalance considerations when evaluating classification outputs.
- Used precision and recall to evaluate model behavior and understand trade-offs relevant to claims classification.

Inventory & Order Management System

Java — SQL — PostgreSQL — JDBC

- Built a relational application for managing inventory, orders, and transactional data using **PostgreSQL** and JDBC.
- Designed SQL-backed workflows for structured data storage, retrieval, filtering, and transaction-oriented operations.
- Applied relational database concepts including normalization, constraints, joins, and transaction management.

TECHNICAL SKILLS

Languages

Python, SQL, Java, JavaScript, TypeScript

Data Analysis

Pandas, NumPy, Data Cleaning, EDA, Feature Engineering, Statistical Analysis

SQL & Databases

PostgreSQL, MySQL, Joins, Aggregations, Subqueries, Relational Data Modeling

Visualization & BI

Streamlit, Interactive Dashboards, Data Visualization, Analytical Reporting, KPI-oriented Analysis

Machine Learning

scikit-learn, XGBoost, Classification, Predictive Modeling, Model Evaluation, Similarity Analysis

NLP & Text Analytics

TF-IDF, SentenceTransformers, Embeddings, Semantic Similarity, Text Preprocessing

Tools & Engineering

Git, GitHub, FastAPI, Docker, GitHub Actions, REST APIs

ANALYTICAL FOCUS

Data Preparation | SQL Analysis | Exploratory Data Analysis | Feature Engineering | Dash-
board Development | KPI Reporting | Data-driven Decision Support
