

EKLAKH DEWAN

Web Developer — Full-Stack — React — TypeScript — Backend APIs

eklakh.inplace@gmail.com — GitHub — LinkedIn — Portfolio

SUMMARY

Web Developer focused on building responsive, full-stack applications across the frontend, backend, and data layers. Experienced with **React**, **Next.js**, **TypeScript**, **JavaScript**, **FastAPI**, **NestJS**, **REST APIs**, **PostgreSQL**, and **SQLAlchemy**, with practical experience designing application workflows, relational persistence, authentication, asynchronous processing, and AI-integrated web applications. Strong focus on clean API design, responsive interfaces, maintainable architecture, and reliable deployment.

EDUCATION

KPR Institute of Engineering and Technology (KPRIET)

B.Tech – Artificial Intelligence & Data Science

2023 – 2027

CGPA: 8.55/10

EXPERIENCE

Flowrage Technology

Artificial Intelligence Intern

4 Weeks – Virtual

- Integrated the **Google Gemini API** into application workflows supporting automated resume analysis and job recommendation features.
- Developed application components for processing resume and job description data and transforming unstructured inputs into structured representations.
- Built matching and recommendation workflows involving data processing, similarity computation, and API-driven outputs.
- Worked across external API integration, backend processing logic, application workflows, and AI-assisted feature development.

PROJECTS

TaxTrace – AI-Assisted Tax Reconciliation Platform FastAPI — Next.js — TypeScript — PostgreSQL

- Built an AI-assisted tax reconciliation and compliance application connecting a **FastAPI backend** with a Next.js review workspace.
- Designed relational persistence using **SQLAlchemy** and **PostgreSQL**, with Alembic migrations for controlled schema evolution.
- Implemented an exception review workflow with task descriptions, exception/notice-case relationships, and draft persistence.
- Integrated **React Query** and **Tailwind CSS** for API-driven frontend state management and responsive interface development.
- Stage 6 backend changes were validated with **91 passing tests**.

AI-Powered Business Operations SaaS

NestJS — React — TypeScript — Redis — Docker

- Designed a full-stack business operations platform with separated frontend, API, background-processing, and persistence responsibilities.
- Implemented service-oriented backend workflows using **NestJS**, with Redis and BullMQ for asynchronous task processing.
- Designed multi-tenant application concepts, authentication/authorization boundaries, and background execution for AI-assisted workloads.
- Containerized application components with Docker to support reproducible development and deployment workflows.

Intelligent Recruitment Platform

React — JavaScript — REST APIs — AI Integration

- Developed an application workflow for connecting candidate profiles, job descriptions, and automated recommendation functionality.
- Integrated AI-assisted processing into web application workflows while separating frontend interaction from backend processing logic.

TECHNICAL SKILLS

Frontend	React, Next.js, JavaScript, TypeScript, HTML5, CSS3, Flexbox, CSS Grid, Responsive Design
Backend	FastAPI, NestJS, Node.js, REST APIs, API Integration, Asynchronous Processing
Databases	PostgreSQL, MySQL, SQLAlchemy, JDBC, Relational Data Modeling, Alembic Migrations
State & Infrastructure	React Query, Redis, BullMQ, Docker, GitHub Actions, CI/CD, Cloudflare Workers
AI Integration	LLM APIs, Google Gemini API, RAG, Semantic Search, AI-assisted Application Workflows
Development	Git, GitHub, Vite, API Design, Authentication, Authorization, Testing, Debugging

ENGINEERING FOCUS

Full-Stack Development	Frontend Architecture	REST API Design	Database Integration
Authentication & Authorization	Async Processing	Responsive UI	CI/CD
